Launched in 2010, RISC Systems is JLT Canada’s proprietary risk management software. Managing information and data is a key part of the risk management process. Organizations can then use this data and information to help guide them when making decisions about the future.

**MODULES**

**Claims Manager**
Capture claim information right from the initial phone call/letter and track its progress through its lifespan. All relevant information can be stored in one file, in one location, including pictures, reports, letters, emails, notes, etc.

**Incident Manager**
Tracking incidents before they become claims is an important step in the risk management process. The Incident Manager allows users to input these incidents, whether they be 3rd party or workplace safety events. Reporting can be done to find the key risks that are present and any outliers that may become issues in the future.

**Certificate Manager**
The Certificate Manager allows users to track and manage 3rd party insurance certificates. Expiry dates are tracked and users are automatically notified of those coming for expiry. Electronic certificates can be uploaded to the system to create an online depository as opposed to a paper file cabinet.

**Building Inspections**
As part of our building valuation service, RISC Systems can upload property schedules directly into the system, including C.O.P.E. details and valuations such as replacement value. An insurance section has also been added so that users may track their premium values on a year-to-year basis.

**Health & Safety Manager**
Keeping detailed records on health & safety inspections is vital to safeguarding organizations from potential claims. The Health & Safety manager allows users to track these inspections, including the employee who did the inspection, date, and conditions that were found. Follow up can be done through the system to ensure that any problems are fixed and recorded.

ABOUT JLT CANADA

JLT Canada continues to make tremendous strides to improve the way we serve clients by enhancing the efficiency and effectiveness of our processes, systems and operating models to ensure that we improve our service levels. We have retained and hired the best people to spend more time with our clients. Our mainstay for success continues to be driven by our “Client First” approach.

Transparency, communication, and collaboration are the key to our culture. We will continue to invest heavily in promoting and enabling our culture to ensure that our continued growth and geographic spread does not come at the cost of failing to bring the best of JLT to our clients. We place our clients first, champion independent thinking and expect to be judged on the results we deliver.

TRAINING & IMPLEMENTATION

JLT Canada strives to provide the best service for its clients. Implementation and training will be done on a client basis and include the following:

- Webinars
- Hands on training with employees
- Troubleshooting & New employee training
- Full operating manual

BENEFITS OF USING RISC SYSTEMS

- User-friendly
- Cloud-based, no software to install
- Creates a culture of risk management throughout organization
- Hands-on training
- Robust reporting features
